META shelving systems

Shelving systems are ideal for storing ordinary goods and small parts. With its core products the boltless META CLIP shelving, META can offer innumerable customised warehousing solutions.

With just two building blocks (frame and shelf), complex rows of racks can be constructed for all small parts storage applications (e.g. in spare parts storerooms in industry and small trades, or sales stores in production-linked trade).

META CLIP boltless shelving systems can be set up quickly without tools. They can be extended or converted at any time to meet the requirements, and can therefore adapt optimally to the stored goods.

The extensive range of accessories can be used to create innumerable variants, and a series of special solutions such as inclined shelves, racks with storage bins, tyre and wheel racks, and hazardous goods racks.

Whether it is in the form of small rows of shelves or multi-tier shelving systems, META CLIP provides the optimal solution for any size of warehouse or storeroom.

All META shelving comes with a 5 year quality guarantee.

The shelving is available with galvanized surface or with additional plastic coating in RAL 7035 light grey.
